Abstract. Flue gas desulphurization (FGD) gypsum is understood as being the hydrated calcium sulphate ($\text{CaSO}_4 \cdot 2 \text{H}_2\text{O}$) produced within the flue gas desulphurization of power stations. In the following, FGD gypsum is also referred to as raw gypsum. The analysis of FGD gypsum includes the chemical analysis of FGD gypsum constituents and the determination of further properties, which are defined in the quality requirements for gypsum as worked out by Bundesverband der Gipsindustrie as well as ...
