Bioenergetics, or biochemical thermodynamics, is the study of the energy changes accompanying biochemical reactions. Biologic systems are essentially isothermic and use chemical energy to power living processes. How an animal obtains suitable fuel from its food to provide this energy is basic to the understanding of normal nutrition and metabolism.

How is stemness preserved? The mechanisms underlying maintenance and self-renewal of pluripotent stem cells are yet to be determined. Both transcriptional and metabolic control have been shown to contribute to the tight regulation of stemness ([1][1], [2][2]). Any efforts to further understand how stemness is preserved have enormous translational potential, particularly in scenarios of ...
