Two or more figures are similar if the corresponding angles are equal, and the corresponding sides are in proportion. To solve the similarity problem, you usually need to create a proportion and solve for the unknown side. ## **Common Core Similarity Ratio Proportion**

If two triangles are similar, then their corresponding sides are proportional. Since sides are a length and lengths are one dimensional, the side ratio will not predict the ratio of the areas. To find the area ratios, raise the side length ratio to the second power. This applies because area is a square or two-dimensional property.

CCSS.Math.Content.7.RP.A.1 Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units. For example, if a person walks  $\frac{1}{2}$  mile in each  $\frac{1}{4}$  hour, compute the unit rate as the complex fraction  $\frac{1}{2} / \frac{1}{4}$  miles per hour, equivalently 2 miles per hour .
