Pulsed radiofrequency is the technique whereby radio frequency (RF) oscillations are gated at a rate of pulses (cycles) per second (one cycle per second is known as a hertz (Hz)). Radio frequency energies occupy 1.0 x 10 4 Hz to 3.0 x 10 11 Hz of the electromagnetic spectrum.Radio frequency electromagnetic energy is routinely produced by RF electrical circuits connected to a transducer ...

The conversion counting pulses to frequency, however, must be done by user software. Despite it is a not complicated evaluation, many users of 57-200 have difficult to implement it. Think in this case, I program an easy subroutine to do this calculation and a little text about theory and practical implementation.

How to calculate frequency from counting pulses ...

This chapter addresses the commonly held notion that a short rectangular monochromatic radio-frequency (RF) pulse is capable of exciting a wide range of off-resonance Larmor frequencies because by limiting the length of the RF sine wave, its frequency becomes "uncertain" due to the Uncertainty Principle.

The pulse repetition frequency (PRF) is the number of pulses of a repeating signal in a specific time unit, normally measured in pulses per second.The term is used within a number of technical disciplines, notably radar..In radar, a radio signal of a particular carrier frequency is turned on and off; the term "frequency" refers to the carrier, while the PRF refers to the number of switches.

A pulse is a rapid change in the amplitude of a RF signal or in some characteristic a RF signal, e.g., phase or frequency, from a baseline value to a higher or lower value, followed by a rapid return to the baseline value. For radio frequencies near the Larmor frequency, it will result in rotation of the macroscopic magnetization vector.The amount of rotation will depend on the strength and ...

Beats per minute (BPM - Rotational speed), frequency. Beats per minute (BPM) is a unit typically used as either a measure of tempo in music, or a measure of one's heart rate. A rate of 60 bpm means that one beat will occur every second. One bpm is equal to 1/60 Hz.

This IC is basically a voltage to frequency converter but it can be used as a frequency to voltage converter. Its applications also include A to D conversion and long term integration. FV converter WORKING. In this circuit, lm331 is used to convert frequency into voltage. The voltage on the output is proportional to the frequency at the input.

SY020 Pulse Rate to 4-20mA or Voltage Converter. The SY020 Pulse Rate Converter can be linked to any frequency generating device e.g. flow meters, which gives TTL, pulse Reed switch or coil output, converting the frequency to an analogue signal. This can be 4-20mA loop current or a voltage output. The 4-20mA version unit is loop powered.

RF vs IF. This page describes difference between RF(Radio Frequency) and IF(Intermediate Frequency).It also explains how one frequency is converted to the other and viceversa. Both the terms are used in wireless system, IF to RF and RF to IF conversion can be done using a device called mixer. The same conversion can be achieved by way of single conversion or dual conversion.

The frequency values equate to steps/degrees of a mph meter scale. To determine speed, this circuit accepts measured value of periods of the distance pulses and converts the periods into corresponding step values. These step values represent frequency of the distance pulses which convert readily into mph values.

Two dimensional plots of the relative efficiency of MQ excitation and conversion are given as a function of radio frequency (rf) amplitude and pulse width. Data are presented for the excitation of five-quantum coherence (5QC), as well as for 5QC to three-quantum coherence (3QC) conversion, 5QC to 1QC (the central transition coherence) conversion, and 3QC to 1QC conversion.
