Evolution: A Theory in Crisis is a 1985 book by Michael Denton, in which the author argues that the scientific theory of evolution by natural selection is a "theory in crisis". Reviews by scientists say that the book distorts and misrepresents evolutionary theory and contains numerous errors.

### Evolution: A Theory in Crisis - Wikipedia

More than thirty years after his landmark book Evolution: A Theory in Crisis (1985), biologist Michael Denton revisits his earlier thesis about the inability of Darwinian evolution to explain the history of life. He argues that there remains "an irresistible consilience of evidence for rejecting Darwinian cumulative selection as the major driving force of evolution."

The theory is "still" in crisis because Denton's first book on this topic was written over 30 years ago. Not much has changed, except that the explanatory power of the neo-Darwinian description of evolution has gotten much more bleak. Hold your hand out in front of you, fingers spread. Witness an engineering feat: the pentadactyl limb.

### Evolution: Still a Theory in Crisis | Discovery Institute

The 1986 book by Michael Denton, "Evolution: A Theory in Crisis," is a secular critique of orthodox Darwinism. It is thoughtful, logical, empirical and well-written. Denton is sympathetic and fair, showing rare insight and compassion towards Charles Darwin. He distinguishes "microevolution" from "macroevolution."

### A Theory in Crisis | The Institute for Creation Research

In his 1985 book Evolution: A Theory in Crisis, Michael Denton argues for a typological model of nature - a model in which "...all the variation exhibited by the individual members of a particular class [is] merely a variation on an underlying theme or design which [is] fundamentally invariant or immutable" (Denton, 1985, p. 94). This model is in direct contradiction with the evolutionary account of the history of life, in which all organisms are linked by common descent.
