On the engine dyno, with a factory stock cam, the engine will make power up to around 3,600 rpm, then "flat line" or fail to produce more power after that. How a high-performance cam with increased lift and duration help the engine produce more power - Air is very flexible. It can be compressed as well as it can be expanded.

### Information about Small Engine Valves, Springs, Lifters ...

The North American Aviation XB-70 Valkyrie was the prototype version of the planned B-70 nuclear-armed, deep-penetration strategic bomber for the United States Air Force Strategic Air Command.Designed in the late 1950s by North American Aviation (NAA), the six-engined Valkyrie was capable of cruising for thousands of miles at Mach 3+ while flying at 70,000 feet (21,000 m).
